The figure shows a receiver operating characteristic (ROC) curve with different conditions and attributes:

- **all attributes**
- **no funct, prot class**
- **no phenotype**
- **no funct, pheno, prot class**
- **no 2hop SL-containing**
- **no 2hops**
- **no localization**
- **experimentally validated predictions**
- **random**

The false positive rate is plotted against the true positive rate for each condition. The inset focuses on the region near the origin, allowing for a more detailed view of the curves in that area.
